HOW TO OPEN A WINE BOTTLE: A SIMPLE GUIDE

**1.** Determine whether the bottle has a cork or a screw cap.

INEXPERIENCE IS YOUR SECRET!

2. If the bottle has a cork, an easy-to-use tool is the winged corkscrew opener.

screw

Winged Corkscrew Opener

3. The sharp tip of the screw can be used to start cutting away the foil around the neck of the bottle.
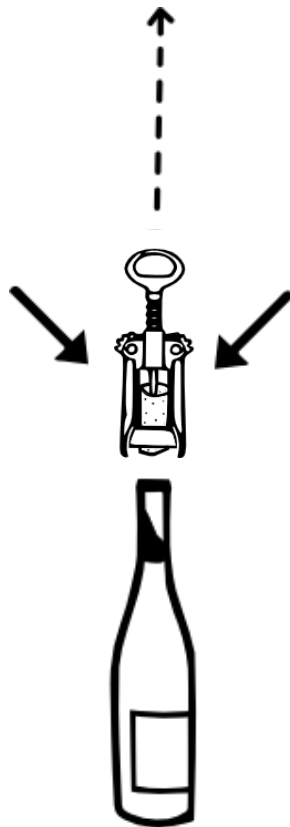

4. With the wings all the way down, place the ring of the opener over the mouth of the bottle.

5. Twist the handle in a clockwise direction. As the screw works its way down into the cork, the wings will rise until they are pointing up.

6. Push the wings down. The screw will rise, pulling the cork out of the bottle.

7. Pour and enjoy!
